

Talk title:
Highlights from Present Cherenkov Telescopes

Author:
Dominik Elsaesser

Cherenkov telescope facilities around the globe are operating at very high efficiency and are one of the pillars on which the new era of multi-messenger astrophysics is built. While progress is in parts always driven by development of new and more sensitive experiments, continued operation for a transition period and scientific harvesting of the existing facilities is an indispensable aspect of strategic development for the field. In this talk, recent highlights from leading Cherenkov telescope systems will be presented and discussed.
